SHIFTMANAGER

Operations Solution

One Plan For All

Short-term Planning and Execution Solution.

Mining is shifting the focus from how well an operation moves material to how well it collects, analyses and acts on information to move material more productively.

ShiftManager is a planning and execution solution giving transparency so users can collaborate and communicate through a single integrated web-based plan.

ShiftManager updates users to be agile and proactively respond to intra-shift changes by updating in real-time.

From disconnected to connected, from uncoordinated to coordinated, ShiftManager is easy to deploy and will increase efficiency, safety and shareholder value.

Break Down Silos

ShiftManager provides a single plan that's continuously kept up to date with the latest information, providing visibility to the entire operation, amplifying decision-making capabilities.

Easy Hand Over

Make shift change simple and effective. Gives the oncoming team visibility of the previous shift as well as the plan to complete.

Mobile

ShiftManager has a mobile application to ensure everyone has access to the information they need, regardless of where they are.

Improved Safety

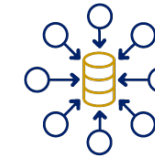

Planned work is safer work. ShiftManager provides a mechanism to plan tasks from inspections to audits and ensures that they are completed.

Collaboration

Cross-functional teamwork can now be planned and executed using ShiftManager, with improved visibility and communication.

Integrated Systems

ShiftManager easily connects to any planning, ERP, telemetry, HR or work management system to seamlessly exchange information.

ShiftManager Mobile

ShiftManager is available as a native mobile application, providing your teams with the shift plan in the palm of their hands. Workers in the field and away from a computer now have the same access to information.

As ShiftManager can be connected to many systems, it updates throughout the shift as changes happen to provide one plan for all. Whether you are in maintenance, drilling, production, planning or training, everyone has the same information.

Empower your crews and supervisors to easily record information in the field and feed all your systems, dashboards and reports in real-time.

ShiftManager Mobile lets you communicate issues or required work with the rest of the team. With a few simple clicks, any worker can enter comments or attach pictures to improve the detail and quality of your inspections.

Live Plan with Real-Time Data At Your Fingertips

Seamlessly Connected Information for Online Reporting

Capture KPI's and Shift Tasks Live From the Face

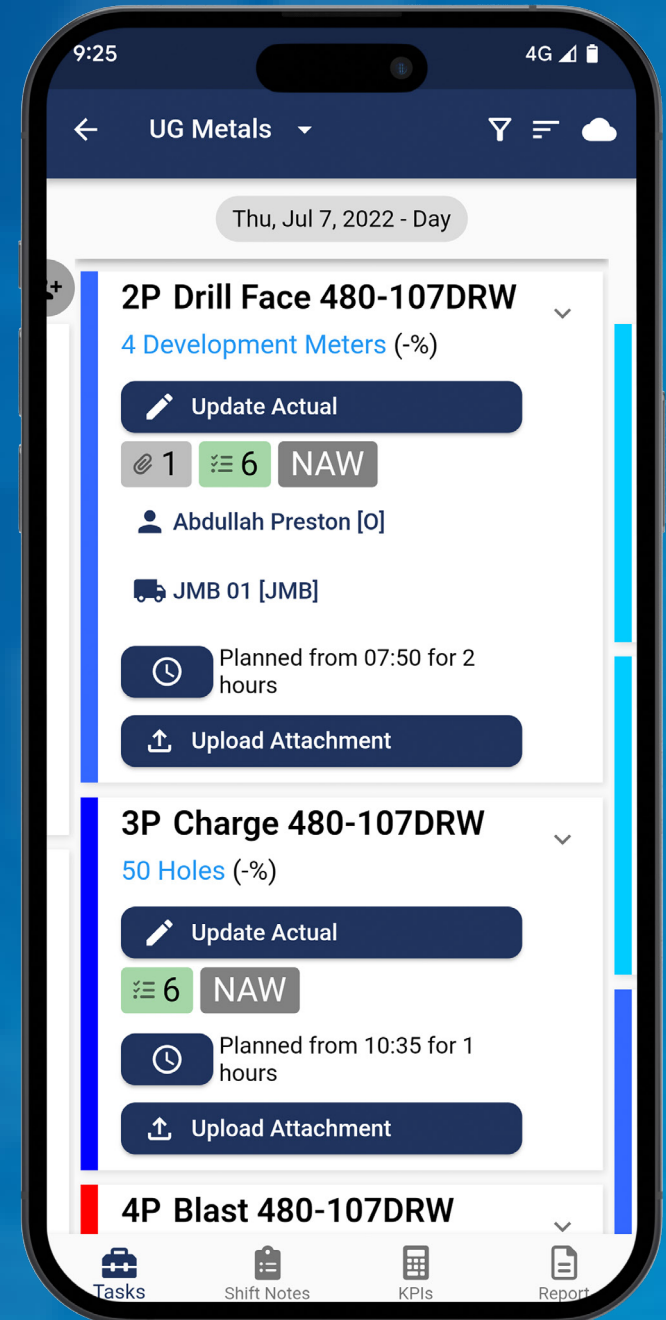

Work Anywhere, Anytime with Online Nativity

Underground and Open Pit Capability

Increase Visibility by Capturing Images Against the Tasks

Stay in Control Right Down to the Shift Level

One Plan For All

ShiftManager is a web-based software accessible by multiple users at the same time, and allows users to plan 'in shift' activities. It gives everyone on shift the right information when they need it through a live plan with real-time data at their fingertips.

ShiftManager can be connected to as many systems as it needs to be; however, it will also operate in a standalone environment. While it is possible to connect and share data from any system (maintenance, production, training), connection to other systems is certainly not mandatory. Start with the basics, then integrate additional systems once the benefits are proven.

Get More Done

Planning is now able to be completed cross-functionally in a single system. Time spent in meetings, working on spreadsheets, and keeping up with actual performance can be reduced, and your planners can focus on learning from results and building more efficient plans.

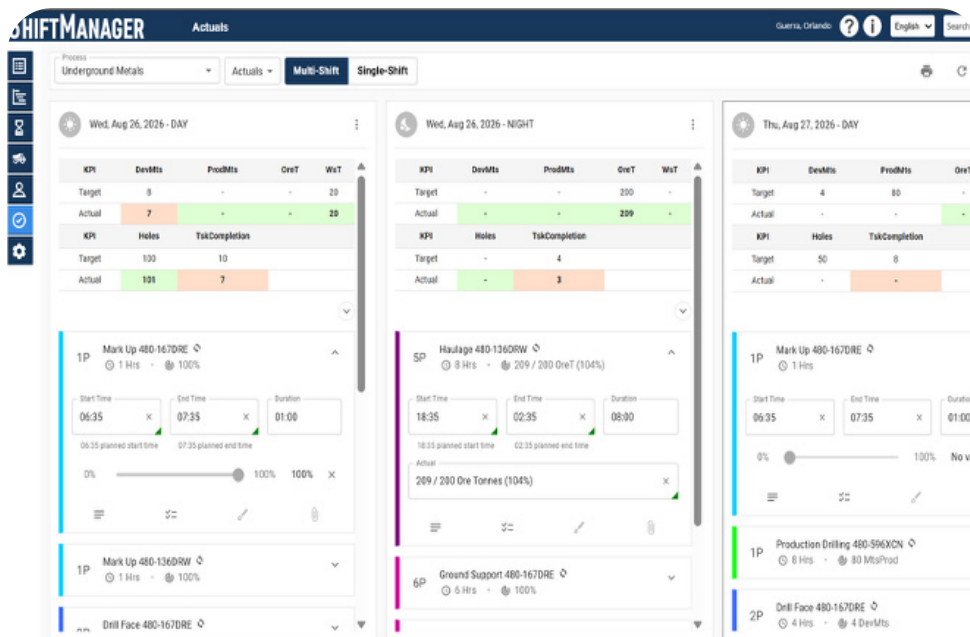

Accountability and Visibility

When compiling the weekly plan, the detail normally stops at high-level 'productive' tasks that have easy-to-measure metrics such as 'tonnes, bcm's or metres'. ShiftManager increases the visibility of 'enabling' tasks. Failure to complete 'enabling' tasks, such as extending a trailing cable or fixing a ramp, will eventually impact productive tasks.

Close the Loop

Once a task is completed, it is reported so that there is a record of what was actually achieved against the plan.

If a task is incomplete, ShiftManager will automatically prompt users to provide reasons to explain why, allowing you to improve the plan next time.

RPMGLOBAL

**For almost 50 years
RPMGlobal has been
Advancing Mining with
advice and technology
solutions that provide
a step-change to the
accepted process.**

Guided by our underlying principles of mining expertise, innovation and sustainability, we strive to create safer, more efficient and more sustainable operations for our customers. Our focus on providing advanced mining technology, together with deep domain expertise across the mining lifecycle enables us to guide customers through the current and emerging challenges being faced by the industry worldwide.
