

RPMGLOBAL

AMT

 Asset Management Solution

Reduce costs, boost availability,
and extend asset life - all in
one platform.

Discover the Industry-Leading Asset Management Solution for Mining

AMT is the industry's most advanced asset management solution, purpose-built to help mining operations maximise equipment performance, minimise cost, and **make smarter maintenance decisions**.

AMT Asset Management Software is the only maintenance solution that dynamically forecasts all your fleet's maintenance requirements **down to the component level**.

AMT provides accurate cost positions and optimises maintenance strategies using **RPM's Dynamic Life Cycle Costing (DLCC) Engine**. The DLCC is constantly updated using actual events and real-time condition data to generate a forward-looking, life-cycle view of an asset.

Dynamic Life Cycle Costing (DLCC) Engine

Providing powerful forecasting - in real time.

Equipment Modelling

Model potential asset selections and perform feasibility studies.

Advanced Work Management

Short-term planning and execution.

Live Budgeting and Forecasting

AMT keeps a live Zero-Based Budget to a component level including all planned and unplanned events.

Long-Term Planning

Review upcoming activities, forecast components, and optimise the long-term plan before a work order is created.

AMT Mobile

Available offline, AMT mobile is a solution for managing work orders, defects, checklists, and measurements.

AMT is used to manage or track over 50% of the world's large mining equipment.

Purpose-Built for the Mining Industry

Optimised for the scale, pace,
and precision mining demands.

Proven Maintenance Intelligence You Can Trust

Powered by RPMGlobal's
Dynamic Life Cycle Costing
Engine.

Smarter Forecasting at Every Level

From components to fleets
- optimise cost, downtime,
and resource use.

AI-Powered Maintenance Insights

Value generating Insights delivered through fast, natural-language summaries that support better decisions at every level.

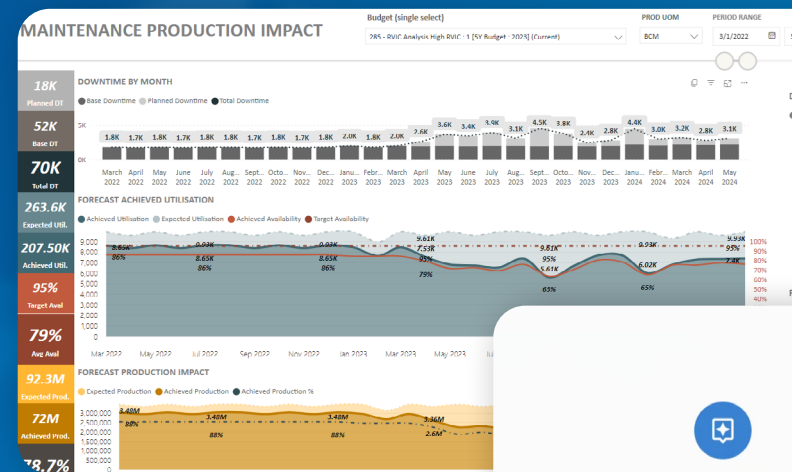

Intuitive Scheduling & Reporting Tools

Easy to use, quick to onboard
- insights available in minutes,
not weeks.

Built for Scale, Security, and Speed

Enterprise-grade performance
that grows with your operation.

The Power of DLCC

The DLCC is the heart of AMT – a powerful, live calculating engine that provides users with [a real-time forecast of all maintenance events](#) for equipment to the end of its useful life.

The power of the DLCC is that it calculates not just costs but [utilisation, productivity and resource requirements](#) (labour, components, parts, and consumables) and dynamically sends data to every aspect of your maintenance operation for precise output.

This functionality enables asset managers to [easily identify potential issues](#) and take action early, [saving money and avoiding costly downtime](#). The DLCC allows asset managers to understand the impact of their current decisions operationally for the remainder of the asset's life.

The DLCC facilitates and [improves collaboration between maintenance and planning systems](#) by linking to the mine plan. This powerful connection ensures maintenance costs are more than a year-on-year linear relationship.

AMT is More Than an Asset Management Tool

See the Full Picture with Real-Time Reporting

Access live maintenance insights through configurable dashboards tailored to highlight important information to specific users. With over 300 standard reports, AMT ensures every user gets the data they need, when they need it.

- **Monitor performance** with daily role-specific KPIs
- **Stay audit-ready** with statutory and compliance reporting
- **Focus decision-making** with custom views of key metrics guesswork and drive action

Stay Ahead with Proactive Component Management

Track component performance against the budget and predict future outcomes using deep historical analysis. AMT helps you plan smarter, reduce failures, and extend component life based on historical performance to predict the future for your components.

- **Analyse failures** by mode, cause, and symptoms
- **Predict component outcomes** using historical trends
- **Improve planning** with budget vs actual performance

Plan Smarter with Scenario Analysis

Explore multiple maintenance scenarios without altering your live model. AMT enables fast, risk-free analysis so you can find the most effective strategy for every machine.

- **Run “what-if” analysis** without risk
- **Compare alternative strategies** side-by-side
- **Choose the best approach** for cost, availability, and performance

AMT DataMart - High-Performance, Enterprise-Grade Reporting

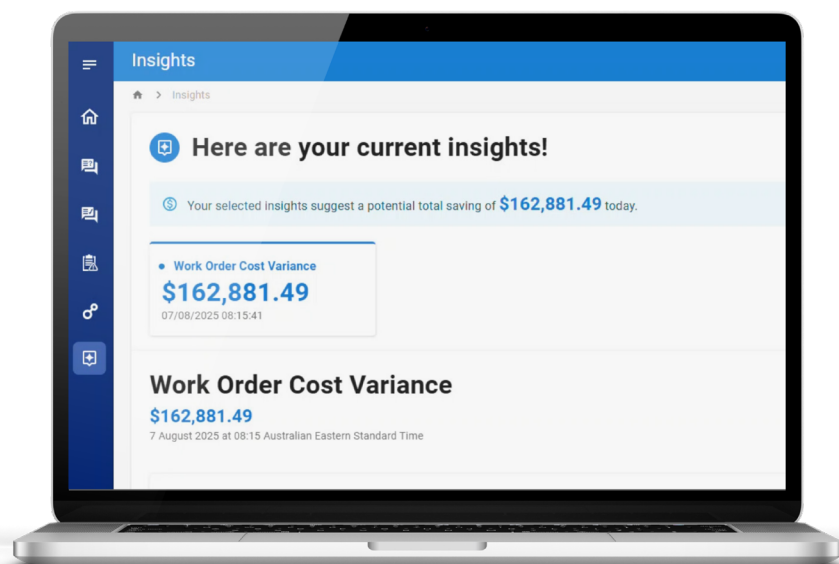

AMT DataMart is a dedicated reporting layer that enables fast, reliable analytics - without affecting your live AMT environment. Designed for large, complex operations, it supports compute-heavy reporting and BI dashboards like Power BI, while keeping transactional performance smooth and secure.

- **Run complex reports** in seconds, even across large datasets
- **Isolate reporting workloads** to protect system stability
- **Leverage enhanced data models** for easier, more powerful reporting
- **Supports Power BI** and enterprise BI tools out of the box
- **Ideal** for large fleets, data-driven teams, and AMT Insights users

AMT Insights: Your Built-In Virtual Consultant for Asset Management

AMT Insights is an **AI-powered, built-in virtual consultant** that continuously monitors your asset data and delivers incisive, practical intelligence - right when you need it. From strategies and work orders to budgets, risk, and the master data that supports it all, AMT Insights identifies underlying issues and **provides precise, actionable recommendations** to optimise your maintenance and asset management practices.

Whether you're refining a strategy, reviewing work order costs, or validating master data, **AMT Insights ensures you're making decisions backed by data-driven intelligence** - maximising the performance and value of your AMT solution.

Transform Data Into Decisions

Powered by a dedicated Large Language Model (LLM) trained on proprietary AMT structures and RPMGlobal's consulting expertise, AMT Insights uses generative AI to turn scattered, complex data into clear, natural-language narratives - tailored to each user's role and data access level.

- **Continuously monitors** your AMT data to detect key trends, anomalies, and opportunities
- **Explains what changed and why** with concise, two-paragraph summaries and KPI highlights
- **Accelerates investigations**, cutting analysis time from hours to minutes
- **Highlights critical gaps** such as incomplete strategies or poor data coding practices
- **Delivers real-time recommendations** that eliminate guesswork and drive action

Built for Enterprise-Grade Security

In RPMGlobal-hosted environments, each customer's data is isolated in its own LLM instance, protected with:

- **End-to-end encryption**
- **Strict access controls**
- **Compliance with industry-leading security standards, including SOC 2 and ISO 27001**

RPMGLOBAL

**For over 50 years
RPMGlobal has been
Advancing Mining with
advice and technology
solutions that provide
a step-change to the
accepted process.**

Guided by our underlying principles of mining expertise, innovation and sustainability, we strive to create safer, more efficient and more sustainable operations for our customers. Our focus on providing advanced mining technology, together with deep domain expertise across the mining lifecycle enables us to guide customers through the current and emerging challenges being faced by the industry worldwide.
