

Press Release

RPMGlobal releases major update to AMT with new AI Insights to Drive Maintenance Performance

19 August 2025

RPMGlobal (RPM) has officially launched **AMT 9**, a major new release of its flagship asset maintenance platform, designed to help miners, contractors, and heavy equipment manufacturers (OEMs) drive better maintenance outcomes. AMT 9 introduces powerful new features including AI-generated insights, a high-performance reporting environment, and an extensive list of system-wide enhancements that help teams reduce costs, increase equipment availability, and make smarter decisions faster.

“Our customers manage some of the largest and most complex fleets in the world. AMT 9 delivers the speed, scalability, and intelligence they need to keep those operations running efficiently and reliably - now with AI-powered insights that make it faster and easier to understand what’s happening and make decisions that add real value.” said Michael Baldwin, Chief Commercial Officer of RPMGlobal.

AMT has long been recognised as the mining industry’s most advanced maintenance platform, built around RPMGlobal’s proprietary Dynamic Life Cycle Costing (DLCC) engine. This engine automatically forecasts the future expenses, equipment downtime, workforce requirements, and parts consumption for every asset and component - turning live operational data into actionable strategies with quantifiable impact. With AMT 9, this proven foundation becomes even smarter, more accessible, and more scalable. One of the most significant advancements is **AMT Insights**, an inbuilt virtual consultant that uses the power of AI to continuously monitor AMT data and present incisive intelligence, generating practical, high-impact recommendations that deliver tangible value. By analysing maintenance data, AMT Insights uncovers the key drivers behind asset performance and highlights opportunities to optimise maintenance operations with quantifiable impact. From strategy and budgets to work orders and master data, AMT Insights removes the guesswork and drives smarter, faster decisions across maintenance operations.

AMT 9 makes reporting faster and easier with a new high-performance **Data Mart**. This feature lets teams run detailed reports and build dashboards, without affecting day-to-day system performance. It is especially helpful for larger organisations, or those using AMT across multiple sites, where speed and stability matter most. Popular reporting tools, such as Power BI, connect directly, allowing teams to work with familiar systems to analyse and share insights with ease. The latest release also features powerful new dashboards with standard, pre-configured views, reducing the time it takes to realise value by providing instant access to critical metrics out of the box. This latest version of AMT delivers faster performance and stronger security to keep maintenance operations running smoothly and safely. Re-engineered for speed, it reduces page load times, accelerates job processing, and streamlines report generation - saving valuable time across the business. Enhanced with the latest security architecture and compliance measures, AMT 9 also gives IT teams the assurance that critical maintenance data is protected to the highest standard.

AMT 9 includes integration with a major OEM’s service option system, giving their equipment dealers instant access to the latest approved service data. This live connection streamlines budgeting, quoting, and maintenance planning by eliminating manual file handling and ensuring all service options and cost parameters are always accurate and up to date.

This means dealers can significantly reduce administrative effort and avoid costly errors caused by outdated information. Faster access to reliable data also speeds up contract preparation and improves customer confidence, helping dealers deliver smoother service and win more business.

For existing customers, AMT 9 is a significant step forward - delivering advanced tools that help users extract deeper insights from their data, reduce manual work, and support better data-backed decisions across every level of the business. For new customers, AMT 9 provides an enterprise-ready platform that is proven, powerful, and ready to deliver results immediately. Whether you’re managing a single site or a global fleet, AMT 9 brings the actionable insights, enterprise-grade scalability, and intuitive usability needed to drive maintenance performance in today’s complex operating environments.

AMT 9 is available now, bringing a new level of performance and capability to maintenance planning. With features like AI-powered insights, high-speed reporting, and system-wide enhancements, AMT 9 helps organisations make faster, more informed decisions that reduce cost, improve uptime, and extend the life of critical assets.

About RPMGlobal:

RPMGlobal Holdings Limited (ASX: RUL) [RPM®] has been advancing the global mining industry through the provision of innovative software solutions and deep domain expertise for more than 50 years. The company's industry-leading solutions are tailored to address the needs of miners globally, optimising operations and extracting more value across all mining horizons. In partnership with the industry, RPMGlobal has delivered safer, more efficient, and more sustainable operations in over 125 countries.
